

Does Your SQL Server Have Performance Issues?

Find out with the database health monitor

[Download Now](#)

Database Health Monitor is a powerful performance monitoring and diagnostics solution that shows administrators server health, performance or availability problems within their SQL Server environment, all from a central console.

Helping Administrators Perform Monitoring Faster

The historic wait stats monitoring the instance level reports that give a quick overview of your SQL Server. Our tool helps you monitor and quickly understand the health of your database.

Save time tuning with the Database Health Reports

Database overview including:

- [backups](#)
- [disk](#) space
- [duplicate indexes](#)
- [index fragmentation](#)
- [long running](#) queries
- [one time use queries](#)
- [plan cache](#)

- queries [needing params](#)
- [statistics](#)
- [stored procs](#) with the most logical writes
- [unused indexes](#).

The server overview includes:

- [connections](#) by database
- [CPU](#) usage
- [page reads](#) by database
- [page writes](#) by database
- [plan cache](#) by database
- [queries needing params](#)
- [waits](#) and more

Monitor your SQL Server environments from a central console. There is no limit to the number of servers you can monitor. [Download Now](#)

Free for a 1 server connection, paid and gamification options for connecting to more SQL Servers.

Licensing Explained

What's in the tool?

Database Health Monitor is a tool built by Steve Stedman to help SQL Server administrators find the performance issues or bottlenecks on SQL Server. The tool started as a way to help gather metrics for our own environments in 2010 and we have added to it and ensure it continues to work in the latest versions of SQL Server. The tool is now available for free.

We know you will benefit from using this tool to monitor your environments. If this works for you and helps, great! If you would be so kind and tell others about, you have our thanks.

Download Database Health Monitor and do all your own performance monitoring.
