

TSQL To Find Fragmented Indexes

Prior to the [Database Health Reports](#) with the [Fragmented Indexes Report](#), I used the following query to track down fragmented indexes.

```
SELECT ps.avg_fragmentation_in_percent, name
FROM sys.dm_db_index_physical_stats (DB_ID(), NULL, NULL, NULL, NULL) AS ps
INNER JOIN sys.indexes AS idxs
    ON ps.OBJECT_ID = idxs.OBJECT_ID
    AND ps.index_id = idxs.index_id
```

But now it is so much easier with the [Database Health Reports](#) with the [Fragmented Indexes Report](#).
