

Server Overview

With the server overview report, you can keep close tabs on some of the key performance indicators for a SQL Server database.

The server overview page gives you a quick rundown of the following:

- Historic Waits
- [Plan Cache](#)
- [CPU By Database](#)
- [Server Connections](#)
- [Page Writes](#) / Second
- [Page Reads](#) / Second
- [Waits](#)
- [One Time Use](#) Queries
- Queries [Needing Parameters](#)

The gray buttons in the middle of the page are all the instance level reports. These report are some of the

quickest ways to evaluate the overall status of your entire SQL Server.
